

STATUS OF CLAIMS

1. (Previously Amended) A composition able to treat acute pancreatitis in a mammal comprising,
 - a. a first element comprising a binding element selected from the group consisting of i) a first peptide comprising an amino acid sequence consisting of SEQ ID NO. 2 or a contiguous fragment thereof containing at least the 8 C-terminal residues of such region, wherein the C-terminal phenylalanine is amidated and/or the aspartic acid residue 7 amino acids from the C-terminus thereof is sulfated, and ii) said first peptide wherein said phenylalanine and aspartic acid residue have not been modified, and wherein said binding element is able to specifically bind a CCK-A or CCK-B receptor under physiological conditions,
 - b. a second element comprising a translocation element derived from a Clostridial neurotoxin able to facilitate the transfer of a polypeptide across a vesicular membrane in a pancreatic cell, and
 - c. a third element, linked to and comprised in a separate polypeptide chain from said first and second elements, comprising a therapeutic element derived from a Clostridial neurotoxin able, when present in the cytoplasm of a pancreatic cell, to inhibit or block enzymatic secretion by said pancreatic cell, and wherein following binding of said first element to a pancreatic acinar cell said third element is transported across a pancreatic cell membrane.
2. (Previously amended) The composition of claim 1 wherein said pancreatic cell is an acinar cell.
3. (Original) The composition of claim 1 wherein said therapeutic element will cleave a SNARE protein and cleavage of said SNARE protein inhibits said secretion.
4. (Original) The composition of claim 3 wherein said SNARE protein is selected from the group consisting of syntaxin, SNAP-25 and VAMP.
5. (Original) The composition of claim 2 wherein said therapeutic element will cleave a SNARE protein, wherein cleavage of said SNARE protein inhibits said secretion.

6. (Original) The composition of claim 5 wherein said SNARE protein is selected from the group consisting of syntaxin, SNAP-25 and VAMP.
7. (Previously amended) The composition of claim 5 wherein said binding element binds the human CCK A receptor.
8. (Original) The composition of claim 5 wherein said binding element comprises an amino acid sequence consisting of SEQ ID NO: 6.
9. (Original) The composition of claim 8 wherein said binding element comprises an amino acid sequence consisting of SEQ ID NO: 5.
10. (Original) The composition of claim 9 wherein said binding element comprises an amino acid sequence consisting of SEQ ID NO: 4.
11. (Original) The composition of claim 10 wherein said binding element comprises an amino acid sequence consisting of SEQ ID NO: 3.
12. (Original) The composition of claim 11 wherein said binding element comprises an amino acid sequence consisting of SEQ ID NO:2.
13. (Original) The composition of claim 1 wherein said composition further comprises a spacer moiety separating said binding element from said translocation element.
14. (Original) The composition of claim 13 wherein said spacer moiety comprises a moiety selected from the group consisting of a hydrocarbon, a polypeptide other than an immunoglobulin hinge region, and a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
15. (Original) The composition of claim 14 wherein said spacer moiety comprises a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
16. (Original) The composition of claim 15 wherein said polypeptide comprises an amino acid sequence consisting of SEQ ID NO:11.

17. (Original) The composition of claim 7 wherein said composition further comprises a spacer moiety separating said binding element from said translocation element.
18. (Original) The composition of claim 17 wherein said spacer moiety comprises a moiety selected from the group consisting of a hydrocarbon, a polypeptide other than an immunoglobulin hinge region, and a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
19. (Original) The composition of claim 18 wherein said spacer moiety comprises a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
20. (Original) The composition of claim 19 wherein said polypeptide comprises an amino acid sequence consisting of SEQ ID NO:11.
21. (Original) The composition of claim 8 wherein said composition further comprises a spacer moiety separating said binding element from said translocation element.
22. (Original) The composition of claim 17 wherein said spacer moiety comprises a moiety selected from the group consisting of a hydrocarbon, a polypeptide other than an immunoglobulin hinge region, and a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
23. (Original) The composition of claim 18 wherein said spacer moiety comprises a proline-containing polypeptide identical or analogous to an immunoglobulin hinge region.
24. (Original) The composition of claim 19 wherein said polypeptide comprises an amino acid sequence consisting of SEQ ID NO:11.

25-50 (Cancelled)
